The global Blowing Agent market was valued at 1208.74 Million USD in 2021 and will grow with a CAGR of 3.38% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The blowing agent is a chemical substance that is used in generating a gas to expand rubber, plastics, and ceramics to create foam. Blowing agents are used to impart features such as low weight, heat insulation, sound absorbency, permeability, elasticity, electrical insulation, excellent textures, wood grain, and shock absorbency. Hydrofluorocarbons (HFC) is the most-widely used product type of blowing agents. HFCs has currently become a widely accepted blowing agent type as they are eco-friendly since they have low ozone depletion potential (ODP). Also, these are used as a replacement for hydrochlorofluorocarbons (HCFCs) as they are scheduled to phase out by 2030. HCFCs are harmful to the environment and hence are scheduled to phase out. This is driving the manufacturers to use HFCs as a replacement for HCFCs in most of the applications.
