The global Boiler Water Treatment Chemicals market was valued at 2818.68 Million USD in 2021 and will grow with a CAGR of 5.64% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The efficiency of the boiler majorly depends on the feedwater used. Untreated water, such as water from rivers, municipality bores and taps can cause severe damage to the boiler. Hence, it's critical to completely remove, or chemically modify the various substances present in untreated water. This is an important step in all chemical process which will avoid any potential damage to the boiler. The chemicals used in treating the feedwater are called the boiler water treatment chemicals. Based on type, the corrosion inhibitors segment is projected to lead the boiler water treatment chemicals market, in terms of volume, during the forecast period. This segment is projected to grow at the highest CAGR, in terms of volume, between 2018 and 2023.
