Damaged bone can be replaced with bone from other parts of the body (autografts), from cadavers (allograft), or with various ceramics or metallic alloys. The use of autografts limits how much bone is available. USA is the largest consumer of bone replacement, with a consumption market share of 54% and a revenue market share of 57% in 2015. The second place is Europe, following USA with the consumption market share of 24% and the revenue market share of 25% in 2015. China is the important supplier of bone replacement. In 2015, the revenue of bone replacement was more than 2.9% share, and the consumption was about 6%. So there are large numbers of bone replacement importing to China.
