The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Boring-Milling Machine, also called boring mills, is mainly used in the boring process. In machining, boring is the process of enlarging a hole that has already been drilled (or cast) by means of a single-point cutting tool (or of a boring head containing several such tools). Boring is used to achieve greater accuracy of the diameter of a hole, and can be used to cut a tapered hole. Boring mills can be divided into horizontal type, vertical type according to its working methods. Besides, boring mill can also be classified as CNC type and ordinary type. CNC type represents highest technology level. Thus, the price of CNC type has great gap with ordinary one. In 2017, about 58.79% boring mills are CNC type. CNC type will also experience faster growth in the coming few years. Asia-Pacific is the also largest consumption region in 2017, with 46.30% market share. Europe is the second consumers, with volume of 878 units. Some countries in like Brazil, South Africa, depend on importing to meet demand
