Brain monitoring is a technology including the application of different devices to image or monitor the structure, function or pharmacology of the brain. Brain monitoring techniques are segmented into structural imaging and functional imaging where structural imaging includes the diagnosis of the nervous system in a larger scale for the disorders like tumor, injury by techniques like CT and MRI. The high incidence of neurological disorders in recent years due to changing lifestyles, rising stress levels, and radical changes in the social environments have cumulatively augmented the demand for brain monitoring devices market. Today, these devices are used for understanding the conditions of patients suffering from Alzheimer's disease, epilepsy, multiple sclerosis, and brain tumors amongst others. Thus, the increasing number of patients suffering from these conditions are expected to serve as a strong market driver for the global brain monitoring devices market.
