Abstracts

The global Brazed Aluminum Heat Exchangers market was valued at 637.72 Million USD in 2021 and will grow with a CAGR of 5.23% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Brazed Aluminum Heat Exchangers (plate-fin heat exchanger), widely used in many industries, such as Industrial gas production, natural gas processing, petrochemical processing liquid natural gas and others. The typical industry expectation for a BAHX life span is approximately 20 years. Vacuum brazing is a high-end joining technology because it results in parts with extremely strong joints and with no residual corrosive flux. The cost of plate-fin heat exchangers is generally higher than conventional heat exchangers due to a higher level of detail required during manufacture. However, these costs can often be outweighed by the cost-saving produced by the added heat transfer. The major manufacturers in this industry include Linde Engineering, Chart Industries and Fives, etc. In 2019, their revenue accounts for 13.20%, 11.58% and 9.83% respectively. By region, the asia-pacific region accounts for the highest share of consumption, more than 45 percent.
