Breathing machine is a piece of equipment that facilitates breathing in the case of low oxygen levels in the blood stream. It aids the body to overcome the inability to breath normally, such as during respiratory failure. Many people suffer from afflictions such as asthmatic conditions, lung cancer and chronic obstructive lung disease. Breathing machines help the victim of lung problems carry on a more normal life by aiding the person as needed. In the last several years, global market of breathing machines developed rapidly, with an average growth rate of 7.2%. In 2016, global revenue of breathing machines is nearly 5.88 billion USD; the actual production is about 6600 K units. The global average price of breathing machines is in the decreasing trend, from 969 USD/Unit in 2012 to 88 USD/Unit in 2016. With the situation of global economy, prices will be in decreasing trend in the following five years. The classification of breathing machines includes asthma nebulizers, PAP machines, oxygen concentrator, and ventilators, and the proportion of PAP machines in 2016 is about 33%. Breathing machines is widely used in hospitals & clinics and home healthcare. The most proportion of breathing machines is home healthcare, and the sales proportion in 2016 is about 67%. USA region is the largest supplier of breathing machines, with a
