Bromine (Br₂) is a reddish brown liquid that gives off dark red, highly corrosive fumes having a sharp, penetrating odor. It is indispensable raw material for inorganic pharmaceuticals, photosensitive materials, dyes and medicine. It is also the base ingredient used in the manufacturing of hydrobromic acid (HBr) which is further utilized as a raw material for organic intermediates and medicines including lithium bromide and terephthalic acid. It is obtained from seawater, natural brines, or as the by-product brines of potash recovery. The Bromine derivatives are the chemical which chemical functional groups are replaced by the Bromine. In the recent years, bromine and derivatives capacity showed a trend of steady growth. At present, the major manufacturers of bromine are concentrated in ICL, Albemarle and Lanxess. ICL is the world's largest bromine and derivatives producer. ICL's sales in 2019 is 321.58 K MT, accounting for 30% of the global share.
