## Abstracts

The global Brushless DC Motors market was valued at 1186.6 Million USD in 2021 and will grow with a CAGR of 7.23% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Brushless DC electric motor (BLDC motors, BL motors) also known as electronically commutated motors (ECMs, EC motors), or synchronous DC motors, are synchronous motors powered by DC electricity via an inverter or switching power supply which produces an AC electric current to drive each phase of the motor via a closed loop controller. The controller provides pulses of current to the motor windings that control the speed and torque of the motor. Asia Pacific is expected to dominate the global brushless DC motors market during the forecast period, owing to increasing demand for consumer electronics and automotive product in China, India, Taiwan, South Korea, and Japan. The North American market is projected to grow at the second-highest CAGR from 2018 to 2023 due to increasing demand for highly sophisticated medical devices. Growing economies, such as China, India, and Taiwan are the most promising markets for brushless DC motors.
