Abstracts

The global Building & Construction Plastics market was valued at 9097.45 Million USD in 2021 and will grow with a CAGR of 5.58% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Building and construction plastics are the key factors that make the infrastructure stronger, lighter, and sustainable. These are used for various purposes such as roofing, insulation, waterproofing, reinforcement, and others. The global building and construction plastics market is driven by high durability, low cost, and non-corrosive property of these materials; changing lifestyles of the population; and rapid urbanization. However, inability of some building and construction plastics to withstand cold conditions, softening at higher temperatures, and weakening & formation of fading appearances due to exposure to UV rays hamper the market growth. Moreover, the toxic nature of such plastics, growing in environmental concerns, and stringent laws by regulatory bodies are the other detrimental factors for the market growth. Furthermore, technological advances such as use of thermoplastics and thermosetting plastics in sanitary equipment, piping, and shuttering along with applications of bio-based and biodegradable plastics present lucrative opportunities for the market players during the forecast period.
