Abstracts

The global Bulk Container Packaging market was valued at 3154.61 Million USD in 2021 and will grow with a CAGR of 8.85% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Bulk container packages are transported in a range of vehicles, from humongous cargo ships to even super long monster truck trailers. Transportation plays the most crucial role in the supply chain operations, as it allows the movement of goods from the place where it is manufactured, to the place where it is ordered. Globalization generates favorable circumstances by keeping manufacturing bases distant from consumption regions. Transportation costs are considered the largest part of the total cost, hence there is a rising requirement for more innovative and cost-effective bulk container packaging solutions, to reduce the transportation costs on the whole. Flexible bulk packaging is expected to register a rapid growth than rigid bulk packaging. Improvements in flexible bulk packaging are generally led by film wrap and flexible intermediate bulk containers. Owing to its increased use in securing pallets and various packaging formats during shipment, film wrap is expected to show a positive growth. Correspondingly, the increase in the usage of films for bundling bulk and multipack items in retail settings, for instance in warehouse-style stores, is driving the growth of the market. In rigid bulk packaging, RIBCs and material handling containers are expected to grow at a faster rate, when compared to the established drums and pails. The increased

demand in the oil and petroleum industry across the globe is a major driver of the global bulk container packaging market. Bulk containers, being reusable and very durable, have a very high operational value and incredible cost efficiency. This along with the increased trade in the global wine and beverages industry is driving the global bulk container packaging market. However, the highly volatile costs of raw materials, and the strict and stringent regulatory policies are significant restraints to the growth of this market. An improved trade relationship amongst the BRICS nations has had a positively significant impact on the global bulk container packaging market.
