The global Calcium Chloride market was valued at 1159.26 Million USD in 2021 and will grow with a CAGR of 4.05% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Calcium chloride is an inorganic, colorless, crystalline salt, which is highly soluble in water. This inorganic compound finds important application in de-icing operations, and in dust control. The calcium chloride anhydrous salt is hygroscopic in nature, and hence is also used as a desiccating agent. The global calcium chloride market is developing due to rising usage of calcium chloride in the process of de-icing. Therefore, in nations where the after-effects of heavy snowfall are hard to oversee, calcium chloride is utilized. There are various nations using calcium chloride such as the U.S., Japan, and Canada. Dust control is another application for which the demand for calcium chloride is growing. As calcium chloride holds the moisture for a long time, it is utilized on unpaved streets for removing dust. The affordability factor of calcium chloride is major reason behind its utilization on street surfaces. The development of this market is likely to be limited by the lessened overall revenues because of an oversupply of cheap materials in the market, as calcium chloride can be produced utilizing different techniques. Corrosive nature of calcium chloride is another factor hampering the development of the market.
