Calcium cyanamide is a chemical compound used in industrial agricultural fertilizers. The fertilizer calcium cyanamide helps plants to reach high yields, thus maximizing profits for farmers. The chemical is applied directly to the soil, where it breaks down into ingredients that are beneficial to plant growth. Calcium cyanamide also functions in other facets in addition to being a fertilizer. The global average price of calcium cyanamide is in the decreasing trend in the last three years, from 608 USD/MT in 2011 to 499 USD/MT in 2015. Prices rose sharply due to the decline in Chinese calcium carbide reduction. The use of calcium cyanamide in the downstream application is fertilizer and pesticide, most used in fertilizer, resulting in calcium cyanamide manufacturers bargaining power is weak, limiting the manufacturers of large-scale production. China is the largest supplier of calcium cyanamide, with a production market share nearly 71% in 2015. Europe is the second largest supplier of Calcium Cyanamide, enjoying production market share nearly 15.4% in 2015. China is the largest consumption place, with a consumption market share nearly 54% in 2015. Following China, Europe is the second largest consumption place with the consumption market share of 17.9%. China is the world's largest exporting country. Market competition is not intense. Jiafeng Chemical
