Calcium cyanamide is a chemical compound used in industrial agricultural fertilizers. The fertilizer calcium cyanamide helps plants to reach high yields, thus maximizing profits for farmers. The chemical is applied directly to the soil, where it breaks down into ingredients that are beneficial to plant growth. Calcium cyanamide also functions in other facets in addition to being a fertilizer. The global average price of calcium cyanamide is in the decreasing trend in the last three years, from 608 USD/MT in 2011 to 499 USD/MT in 2015. Prices rose sharply due to the decline in Chinese calcium carbide reduction.
