## Abstracts

The global Calcium Hypochlorite market was valued at 583.93 Million USD in 2021 and will grow with a CAGR of .47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Calcium hypochlorite is an inorganic compound with formula  $\text{Ca}(\text{ClO})_2$ . It is sold as a white, solid concentrate in granular, tablet or briquette form with a distinct chlorine odor. Calcium hypochlorite is widely used as a disinfectant and bleaching agent. It is considered more stable and has greater available chlorine than sodium hypochlorite (liquid bleach). Calcium hypochlorite production has relatively low technology barrier and is dispersive relatively. Currently, there are many producing companies in the world calcium hypochlorite industry. The main market players are Lonza, Axiall, Barchemicals, Nippon Soda, Tosoh, Weillite and Salt & Chemical Complex. The sales of calcium hypochlorite is expected to increase to 466118 MT in 2018 from 391617 MT in 2013 with an average growth rate of about 3.54%. The sales market is concentrated in Asia-Pacific, North America and Europe. The global revenue increased with the 0.91% average increasing rate. Asia-Pacific is the mainly consumption region due to the bigger demand of downstream applications. This region occupied 52.26% of the global consumption of calcium hypochlorite in 2017. The sales shares of North America and Europe were 22.63% and 18.53%. Calcium hypochlorite is mainly applied in water treating agent production and bleach production. And water treating agent application

and bleach application consumed 64.00% and 25.36% of the global consumption of calcium hypochlorite respectively in 2017. With the development of economy, the downstream application industries will need more calcium hypochlorite. So, calcium hypochlorite has a huge market potential in the future. The major raw materials for calcium hypochlorite are calcium hydroxide, sodium hydroxide and chlorine, etc. Fluctuations in the price of the upstream product will impact on the production cost of calcium hypochlorite, and then impact the price of calcium hypochlorite. We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. The price presents fluctuation according to the economy development status. Also, there is fluctuation in gross margin.
