The global Calorimeter and Photometer market was valued at 36.13 Million USD in 2021 and will grow with a CAGR of 11.21% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A photometer is a device that measures the intensity of light and optical properties of surfaces or solutions. It is used in many laboratory experiments to measure light absorption, irradiance, phosphorescence, fluorescence, luminescence and scattering and reflection of light. A calorimeter is an apparatus used to measure the heat given out or absorbed during chemical reactions or physical changes. It is also used to measure the heat capacity of materials. Both these devices are important and frequently used tools in research, processing and analysis fields, which will drive the growth in the next few years. The U.S. and Canada will lead the global calorimeter and photometer market, owing to the high number of water and wastewater treatment plants across these countries.
