### Abstracts

The global Camera Modules market was valued at 341.79 Million USD in 2021 and will grow with a CAGR of 10.86% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

In the modern dynamic world of technology, the camera modules are widely used in a range of applications such as consumer electronics, healthcare, industrial, security & surveillance, automotive, and aerospace & defense. The consumer electronics market has impacted the camera modules market mostly owing to the usage of CCD and CMOS sensors-enabled camera modules. The demand for digital camera has reduced as smartphones enabled with camera are introduced in the market. Consumers are attracted toward smartphones which serve the purpose of both camera and phone. This market is experiencing a rapid shift in automotive applications, specifically in advanced driver assistance systems (ADAS). ADAS uses camera modules to enhance the driver's safety on the road by offering features such as parking assistance, lane-departure warning (LDW), and collision avoidance systems, all of which can help the car and the driver to gather information about the outside world. The APAC market for camera modules is growing rapidly as most of the camera modules manufacturers are located in APAC. Also, most of the demand for camera modules in APAC region is from the consumer electronics application including smartphones, tablet PCs, cameras, and others. With the inclusion of secondary camera in smartphones, the demand for camera

modules is expected to multiply further. Around one-third of the global smartphone consumption is from India, China, and Japan, collectively. This is expected to drive the APAC camera modules market. Moreover, the development of advanced driver assistance systems (ADAS) for the automotive application is also expected to boost the demand for camera modules in APAC.
