The carbazole is mainly stored in coal tar, and the high temperature coal tar contains about 1.5% carbazole. Due to its high boiling point and high solubility in pyridine, dialkyl sulfoxide or dialkyl formamide, it can be separated by distillation and extraction, or it can be extracted and distilled with ethylene glycol. When pyridine is obtained, the pyridine mother liquor is obtained, and after concentration and crystallization, pure carbazole can be obtained. With the development of science and technology, the use of carbazole has gradually been developed, and the market is in the growth stage, mainly used in the fields of synthetic dyeing (pigment), pesticides, medicine, photoelectric new materials and synthetic resins.
