A carbon fiber is composed of carbon atoms with about 5 to 10 micrometers in diameter. There are various advantages of using carbon fiber in automotive, which include high stiffness, high tensile strength, reduced weight, and tolerance at high temperature. These properties of carbon fiber have resulted in its increased use in the automotive industry. The composition with other materials increases the capability of the materials. Carbon fibers are about five times stronger than steel and other materials. This property encourages the automotive manufacturers to use carbon fiber in increasing the performance of the vehicle. The carbon fiber has various applications such as the exteriors, power train system, under body system, chassis system, and the interior. The increase in use of carbon fiber in automotive industry, is expected to drive the market in near future.
