## Abstracts

The global Carbon Nanotube (CNT) market was valued at 39.11 Million USD in 2021 and will grow with a CAGR of 3.86% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Carbon nanotubes (CNTs) are tubular cylinders of carbon atoms that have extraordinary mechanical, electrical, thermal, optical and chemical properties. CNTs typically have diameters ranging from 1 nanometer (nm) up to 50 nm?a nanometer is one thousand millionth of a meter.In 2015, the US captured the first largest share of the CNTs sales market with 27.94%, while China ranked second with a sales market share with 26.63%, ahead of EU and Japan. Multi-wall carbon nanotubes are the largest product segment, accounting for more than 92% share of the global carbon nanotubes market in 2015. Multi-wall carbon nanotubes consist of multiple layers of graphite/carbon that are superimposed and rolled one over the other to form a cylindrical and tubular structure. However, a number of issues, including high costs, inconsistent quality across the supply chain, dispersion and compatibility with matrix materials, and toxicology still need to be addressed. Once these issues are resolved, growth in global CNTs demand is expected to accelerate in the next five years.
