The global Carbon Textile Reinforced Concrete market was valued at 19.01 Million USD in 2021 and will grow with a CAGR of 5% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Carbon fibers are from the most recent & probably the most spectacular addition to the range of fiber available for commercial use. Carbon fiber comes under the very high modulus of elasticity and flexural strength. These are expensive. Their strength & stiffness characteristics have been found to be superior even to those of steel. But they are more vulnerable to damage than even glass fiber, and hence are generally treated with resin coating. Carbon Textile Reinforced Concrete is one type of Textile Reinforced Concrete which is made by carbon fiber. The world Carbon Textile Reinforced Concrete production market will still have a certain amount of growth owing to the increasing of demand. The market in developed countries will have some growth and the market in developing countries will have a faster growth rate. The world Carbon Textile Reinforced Concrete production will increase at a growth rate of about 5.5%. The main consumption region will be in North America, Europe, Japan and China.
