A pacemaker is a small device that sends electrical impulses to the heart muscle to maintain a suitable heart rate and rhythm. Pacemaker generates an electrical impulse that passes through the leads (wires) to the heart muscles. This causes the heart muscles to contract, thus creating a heartbeat. A pacemaker may also be used to treat fainting spells (syncope), congestive heart failure, and, rarely, hypertrophic cardiomyopathy. These devices are used for regulating the heartbeat of individuals and are segmented into products such as implantable cardiac pacemakers and external cardiac pacemakers. As indicated by Center for Disease Control and Prevention (CDC) sudden cardiac death rates are surpass 600,000 every year, and it has been witness that half of patients bite the dust amid first event of cardiac sickness. The predominance of atrial and ventricular arrhythmias increments with age with no indication of coronary illness. A pacemaker helps the patients experiencing arrhythmias to lead a dynamic and sound way of life, which is expected to provide and impetus to the growth of the global cardiac pacemaker market. The global cardiac pacemaker market is essentially influenced by rising pervasiveness of cardiovascular issue in developed countries, high incidence rate in growing economies, supportive government activities, and non-

government associations subsidizing. Different forces driving cardiac pacemaker market are the technologically advanced diagnostics, robust insurance for treatment and practical advances taken by different governments.
