Carotenoids are organic pigments that are produced by plants and algae, as well as several bacteria and fungi. Carotenoids can be produced from fats and other basic organic metabolic building blocks by all these organisms. The only animals known to produce carotenoids are aphids and spider mites, which acquired the ability and genes from fungi. Carotenoids from the diet are stored in the fatty tissues of animals, and exclusively carnivorous animals obtain the compounds from animal fat. Carotenoids downstream is wide; the major fields are food, feed, pharmaceuticals and cosmetics etc. In recent years, these industries have developed rapidly. Increasing demand for food is expected to drive the demand for the Carotenoids market. As regions such as North America, China, and Europe are food ingredient driven regions, the demand for Carotenoids is high in these areas.
