Abstracts

The global Carpet and Rug market was valued at 3262.35 Million USD in 2021 and will grow with a CAGR of 1.38% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A carpet is a textile floor covering typically consisting of an upper layer of pile attached to a backing. The pile was traditionally made from wool, but, since the 20th century, synthetic fibers such as polypropylene, nylon or polyester are often used, as these fibers are less expensive than wool. The pile usually consists of twisted tufts which are typically heat-treated to maintain their structure. The term 'carpet' is often used interchangeably with the term 'rug', although the term 'carpet' can be applied to a floor covering that covers an entire house, whereas a 'rug' is generally no bigger than a single room, and traditionally does not even span from one wall to another, and is typically not even attached as part of the floor. The Asia-Pacific region is projected to grow at the highest CAGR due to the existence of developing nations such as India where the number of unorganized manufacturers of carpets and rugs is high.
