Abstracts

The global CATV RF Amplifiers market was valued at 408.36 Million USD in 2021 and will grow with a CAGR of 7.84% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Amplifier is an electronic device that can increase the power of a signal (a time-varying voltage or current). A CATV RF amplifier is typically used to boost the signal strength from a CATV source, such as a cable headend or modulator rack. Rising customer preference particularly in developing regions for subscribing television and broadband as a bundled service, and the switch-over from analog to digital television, is accelerating the growth of global CATV equipment and antennas market. Changing technologies, expanding media industry, and continuous progression in government initiatives in rural electrification is expected to fuel the growth of the market. However, the growing trend for watching media content on mobile devices and the continuous adoption to internet TV is seen as a restraint, expected to have significant impact on the market's growth through 2025. This industry is centralized. Top 3 companies in the market occupies about 29% of the Revenue market shares in 2017. The major manufacturers of CATV RF Amplifiers are Qorvo, Macon, II VI Incorporated, Skyworks, Blonder Tongue, ShenZhen ChuangMo Electronics, Analog Device, NXP Semiconductors, Seebest, Texas Instruments, SOFTEL. The need for high power in the VHF, UHF, and microwave bands has led to transistors that can easily supply tens to

hundreds of watts at RF frequencies to 10 GHz and beyond. Most of these devices are made with gallium arsenide (GaAs) or gallium nitride (GaN). In China, CATV RF Amplifiers have a certain market as the development of semiconductor materials but the industry still faces many difficulties. As the same time, in Chinese market, some common foreign brands occupy relative large market share, such as Qorvo, Macon, Analog Device, NXP Semiconductors. The rise of the third generation of semiconductor materials have another opportunity, The major pollutants of semiconductor materials in the production is GaAs, Ga₃ +, In₃ +, etc., and with the promotion of the concept of green environmental protection, people try to find a new type of semiconductor material which can not only meet the demand of the product, but also not pollute the environment. Look to the organic semiconductor, organic material in the semiconductor materials such as C and N), GaN and SiC become a star.
