Abstracts

The global CBCT Systems market was valued at 99.51 Million USD in 2021 and will grow with a CAGR of 6% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Cone beam computed tomography (CBCT) system is a special type of x-ray equipment that provides 3-D views for more thorough analysis of bone structure and tooth orientation. Rise in geriatric population, wide range of applications of CBCT systems in dental practice, and upsurge in number of patients suffering from dental disease are expected to drive the market growth. Moreover, expanding application of CBCT systems in other medical fields such as breast imaging further boosts the market growth. However, high cost of the devices and image related issues such as lack of clarity are expected to impede the market growth. As per the estimates of the World Health Organization (WHO) in 2012, severe periodontal disease, resulting in tooth loss is found in 15-20% of middle-aged adults (35-44 years). In addition, ageing population also poses a risk for dental disorders (such as dental cavities and periodontal disease), which results in complete tooth loss. For instance, according to WHO, about 30% of people aged 65-74 have no natural teeth.
