The global CCD Image Sensors market was valued at 1619.7 Million USD in 2021 and will grow with a CAGR of 3.45% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A CCD or Charge-Coupled Device is an electronic device that can be used as the image sensor in place of film in a digital camera, or in devices like microscopes, telescopes, and scanners. CCDs are also used for certain autofocus and light metering systems in film or digital cameras. A CCD is a rectangular semiconductor chip with a surface built of an array of light-sensitive areas (pixels). Each pixel is a kind of combination of photo diode for light-sensitivity and capacitor for analogue value storage. The charge levels for each pixel are read out sequentially and digitized by separate circuitry. Asia-Pacific dominated the global CCD image sensors market due to the demand generated from China and India.
