The global CdTe Thin Film Solar Cell market was valued at 2536.8 Million USD in 2021 and will grow with a CAGR of 16.4% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Thin film solar cells refer to the fact that these types of solar cells use a much thinner level of photovoltaic material than mono-crystalline or multi-crystalline solar cells. The thin-film solar cells are made by depositing one or more thin layers, or thin film (TF) of photovoltaic material on a substrate, such as glass, plastic or metal. At present, more than 90% of the global photovoltaic market share is crystalline silicon batteries, and other thin film batteries, including Cadmium Telluride. Cadmium telluride (CdTe) is a simple binary compound, which is easy to produce single-phase materials. It has material characteristics such as band gap (~1.45eV) matching ground solar spectrum and absorption coefficient (>10⁵ cm) 100 times higher than silicon material. It is suitable for preparing high-efficiency thin film solar cells. Cadmium telluride solar cells have the characteristics of strong power generation capacity, high conversion rate, low temperature coefficient, good weak light effect and high stability. They are suitable for building photovoltaic integration (BIPV).
