Cell culture is the process by which cells are grown under controlled conditions, generally outside of their natural environment. Cell culture is one of the major tools used in cellular and molecular biology, since it provides excellent model systems for studying the normal physiology and biochemistry of cells and the effects of drugs and toxic compounds on the cells. It is also used in the development of biological compounds. The global average price of Cell Culture is in the decreasing trend, from 45.4 USD/L in 2012 to 42.6 USD/L in 2016. With the situation of global economy, prices will be in decreasing trend in the following five years. The classification of Cell Culture Media includes Classical Media & Salts, Serum-free Media Stem Cell Media, and the proportion of Classical Media & Salts in 2016 is about 58%, and the proportion is in decreasing trend from 2012 to 2016. Cell Culture Media is widely used in Biopharmaceutical Manufacturing, Tissue Culture & Engineering, Gene Therapy and other field. The most proportion of Cell Culture Media is Biopharmaceutical Manufacturing, and the market share in 2016 is 52%. The trend of Biopharmaceutical Manufacturing is decreasing. China is the largest consumption place in Asia-Pacific, with a consumption market share nearly 52% in 2015. Following China, Japan is the second largest consumption place
