Clinker is a nodular material produced in the kilning stage during the production of cement and is used as the binder in many cement products. The lumps or nodules of clinker are usually of diameter 3-25 mm and dark grey in color. It is produced by heating limestone and clay to the point of liquefaction at about 1400°C-1500°C in the rotary kiln. Clinker, when added with gypsum (to control the setting properties of cement and ensure compressive strength) and ground finely, produces cement. Clinker can be stored for long periods of time in a dry condition without degradation of quality, hence it is traded internationally and used by cement manufacturers when raw materials are found to be scarce or unavailable. China has the largest global export quantity and manufacturers in Cement Clinker market, while the Southeast Asia is the second production volume market for Cement Clinker in 2019. In the industry, CNBM profits most in 2019 and recent years, while LafargeHolcim and Anhui Conch Cement ranked 2 and 3. The market share of them is 12.34%, 8.88% and 7.22% in 2019. Nowadays, there are four mainly types of Cement Clinker, including Portland Clinker, Sulfate Resistant Clinker, White Clinker and Others. Portland Clinker is the main one, reaching 89.93% of global sales volume in 2019.
