The global Center Pivot Irrigation Systems market was valued at 110.12 Million USD in 2021 and will grow with a CAGR of 13.74% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Center-pivot irrigation (sometimes called central pivot irrigation), also called water-wheel and circle irrigation, is a method of crop irrigation in which equipment rotates around a pivot and crops are watered with sprinklers. A circular area centered on the pivot is irrigated, often creating a circular pattern in crops when viewed from above (sometimes referred to as crop circles). Most center pivots were initially water-powered, and today most are propelled by electric motors. The global center pivot irrigation systems market gains demand by the modernizing agriculture technology worldwide. Moreover, rise in population coupled with water scarcity issues and the need for higher yield and better quality crops further leads to market growth. Center pivot irrigation greatly helps reduce water usage thereby enhancing agricultural yield. In addition, owing to its advantages over conventional irrigation systems, center pivot irrigation systems market is expected to witness major growth during the forecast period. However, high initial investment and the continuous requirement of maintenance of such systems restrict the market growth potential. In addition, increased trend from flood irrigation system to center pivot systems and high growth potential in the emerging countries pose lucrative opportunities for market growth.
