## Abstracts

The global Central Vascular Access Device market was valued at 2055.05 Million USD in 2021 and will grow with a CAGR of 5.69% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Central venous/vascular access devices are small, flexible tubes placed in large veins for people who require frequent access to the bloodstream. Venous access devices that can be implanted under the skin were introduced in 1982. They allow medications to be delivered directly into larger veins, are less likely to clot, and can be left in for long periods. The CVAD may contain one or two tubes. When a CVAD contains two tubes, it is called a double or dual lumen catheter and may also be used for injecting contrast for CT or MRI scans (depending on type of CVAD). In terms of percentage share contribution by product, the peripheral catheters segment is expected to account for 48.24% by 2025, emerging as the leading segment by value.
