Centralized Patient Monitoring System is a smart monitoring management system that connects a series of patient monitors together and back to a central monitor. It has the capacity to connect more bedside units together which means staff members can complete a ward check at a glance with many patients real time data displayed. Central patient monitoring systems addresses once such pain point of monitoring a large set of patients. The central patient monitoring systems are computer systems that are networked with a fixed number of patient monitors. The central patient monitoring system displays the respectively connected monitoring device waveforms on a single or multiple monitors. This allows the healthcare professionals to monitor and keep a check on the number of patients at the same time. In terms of region, the largest segment of the Centralized Patient Monitoring was North America, which make up the market share about 35 percent. For applications of the centralized patient monitoring system, General Ward is the largest segment with a market share of nearly 61% in 2019. ICU accounted for about 13% of global market.
