Centrifugal separator is a piece of equipment that uses centrifugal force, the force of gravity, and inertia to separate two or more materials. Centrifugal separators work by spinning the material in a chamber at high speed which causes the heavier materials to settle out separately from the lighter materials. Nowadays, there are two mainly types of centrifugal separator, including liquid-liquid separation and liquid-solid separation. And liquid-liquid separation is the main type for centrifugal separator, and the liquid-liquid separation reached a market share of approximately 63% in 2019. Asia-Pacific and Europe were the two largest consumption regions of the global centrifugal separator market in 2019, with about 35% and 31% of the market share, respectively. North America led the rest of market with a share of nearly 24%. Tier 1 of the global centrifugal separator market are GEA, Tomoe Engineering, ANDRITZ GROUP, SPX Plow and Alfa Lava, which totally held about 47% of the global market in 2019.
