The global Ceramic Coatings market was valued at 7593.55 Million USD in 2021 and will grow with a CAGR of 4.18% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ceramic coatings are being extensively used in the automobile and transportation industry owing to its anti-corrosion properties and offering resistance to abrasion and heat. Ceramic coatings are also used for providing a finished polish look on the exterior body of cars slowly replacing wax. With growing research and development activities, ceramic coatings are venturing into wider application segments. Currently, automobile and transportation are expected to be the largest application for ceramic coatings. However, with further product innovations, the ceramic coating is likely to have larger application share than its counterparts such as PTFE or regular coatings.
