The global Ceramic Foam market was valued at 29.08 Million USD in 2021 and will grow with a CAGR of 2.93% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ceramic foam is a kind of tough foam made from ceramics. Manufacturing techniques include impregnating open-cell polymer foams internally with ceramic slurry and then firing in a kiln, leaving only ceramic material. The foams may consist of several ceramic materials such as aluminum oxide, a common high-temperature ceramic, and gets insulating powers from the many tiny air-filled voids within the material. The foam can be used not only for thermal insulation, but for a variety of other applications such as acoustic insulation, absorption of environmental pollutants, filtration of molten metal alloys, and as substrate for catalysts requiring large internal surface area. The ceramic foam industry concentration is relatively high; several manufacturers control more than one half of the global production, and high-end products are mainly from America and western European. Giant manufactures mainly distribute in America, Europe and China. America has a long history and unshakable status in this industry, like Selee and Pyrotek, both have perfect products. As to UK, the Pyrotek is the first producer had become a global leader. In Germany, it is Drache that leads the technology development. In China, the manufacturers focus in Shandong, Jiangxi and Guangdong province. In Jiangxi, there are numerous small producers; their product quality is

relatively poor. This industry is affected by the global economy and government policy, so it's important to keep an eye on economic indexes and leaders' preference. With the global economic recovery, more and more people pay attention to rising environment standards, especially in underdeveloped regions where there is large population and fast economic growth the need of ceramic foam will increase.
