Abstracts

The global Ceramic Matrix Composites market was valued at 1648.93 Million USD in 2021 and will grow with a CAGR of 9.3% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ceramic matrix composites behave much differently from conventional ceramics, and are far different from the high-performance metal alloys that used to be implemented. Like ceramics, they are hard and stable at higher temperatures. But they are also very lightweight (one-third the weight of the nickel superalloys they often replace) and possess significantly greater fracture toughness and thermal shock resistance. Rising energy demand and technological developments in the aerospace and defense sector is accelerating the demand for ceramic matrix composites. The Asia-Pacific region is foreseen to emerge as the fastest-growing region for CMCs. The region encompasses emerging economies such as India, China, Thailand, and Malaysia, with adequate availability of Low-cost raw material and labor. Also, One Belt One Road Initiative, Make in India Initiative, and 100% FDI in automotive are urging manufacturers to set-up production sites as well as distribution networks in Asia-Pacific. However, North America holds the largest market share in the ceramic matrix composites market due to the presence of a Large number of aviation companies. Companies' investments in the R&D for developing CMCs and collaborations with government organizations for upgrading the aerospace and defense equipment are the pivotal factors driving the

North America ceramic matrix composites market growth.
