Cetane improver is a colorless to light yellow color liquid. It is a cost effective additive used to raise the cetane number of distillate fuel stocks and to lower diesel exhaust emissions. It can be readily used by refiners and fuel users in all types of diesel fuel. There are many types of cetane improver, such as nitrates, peroxides and some nitroso compounds. The industrial use of cetane improver is generally nitrates, and the main cetane improver additives manufactured today is 2-ethylhexyl nitrate. Cetane improver downstream is diesel, including petroleum diesel, biodiesel, synthetic diesel and others, the major fields are petroleum diesel and biodiesel. In recent years, diesel vehicles have developed rapidly. Increasing demand for diesel vehicles is expected to drive the demand of the cetane improver market.
