### Abstracts

The global Chelants market was valued at 827.88 Million USD in 2021 and will grow with a CAGR of .1% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Chelants, also known as chelating agents, complexing, or sequestering agents, are compounds that are able to form stable complexes with metal ions. Chelants achieve this by coordinating with metal ions at a minimum of two sites, thus solubilizing and inactivating the metal ions that would otherwise produce adverse effects in the system on which they are used. The technical barriers of chelants are relatively not high, resulting in numerous manufacturing enterprises. In the market, there are some relatively large enterprises, such as BASF, AkzoNobel, Fuyang Biotech, Dow, Dongxiao Biotech, Kaixiang BioChem, Taihe Chem, Huiyang Biotech, PMP, AVA Chemicals, and others. Biodegradable chelating agents are likely to capture a significant share of the chelating agents market in the coming years, especially in EU and USA, owing to potential health and environmental hazards associated with non-biodegradable organic chelating compounds.
