Chemical milling or industrial etching is the subtractive manufacturing process of using baths of temperature-regulated etching chemicals to remove material to create an object with the desired shape. It is mostly used on metals, though other materials are increasingly important. Photochemical machining (PCM), also known as photochemical milling or photo etching, is a chemical milling process used to fabricate sheet metal components using a photoresist and etchants to corrosively machine away selected areas. This process emerged in the 1960s as an offshoot of the printed circuit board industry. VACCO Industries was the world's biggest manufacturer in the Chemical Milling industry, accounted for 7% revenue market share of the global market, followed by Great Lakes Engineering, United Western Enterprises, Tech Met, Orbel, Veco BV, Advanced Chemical Etching, Wickeder Group, PCM Products Inc, MICRO ETCH, Tech-Etch, Precision Micro. The top 5 companies had a combined market share of 30% of the global total. America was the largest consumption area in the world in 2018.
