Abstracts

The global Chilled Beam Systems market was valued at 22.67 Million USD in 2021 and will grow with a CAGR of 8.9% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Chilled beam is a type of convection HVAC system designed to heat or cool large buildings. Pipes of water are passed through a 'beam' (a heat exchanger) either integrated into standard suspended ceiling systems or suspended a short distance from the ceiling of a room. First, for industry structure analysis, the Chilled beam systems industry is relatively concentrated. The top five producers account for about 62.24% of the revenue market. Regionally, Europe is the biggest consumption area of Chilled beam systems, also the leader in the whole chilled beam systems industry. Second, for price trend analysis, a key variable in the performance of Chilled beam systems producers is raw material costs, specifically the speed at which any increase can be passed through to customers. The price of the major raw material varies according to the steel and copper price. This year, as the downturn of global steel industry, the Chilled beam systems price would keep decreasing for at least the following 5 years. Finally, despite the fierce competition, we tend to believe the market has a bright future and the investors should pay more attention to the developing countries. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.
