The global Chip On Flex (COF) market was valued at 146.91 Million USD in 2021 and will grow with a CAGR of 4.55% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Chip-on-Flex, or COF, refers to the semiconductor assembly technology wherein the microchip or die is directly mounted on and electrically connected to a flexible circuit (a circuit built on a flexible substrate instead of the usual printed circuit board). Thus, in a COF assembly, the microchip doesn't have to go through all the traditional assembly steps required for individual IC packaging. This simplifies the over-all process of designing and manufacturing the final product while improving its performance as a result of the shorter interconnection paths. COF is the role of product through the flexible substrate and connected to on-chip liquid crystal panel, the liquid crystal panel and the control chip driver current, voltage, thus changing the state of the liquid crystal display different screens. Currently, COF products are widely used in LCD TVs, smart 3G phones and laptop computers and other products with LCD display driver. Driven by a growing range of applications in the automotive, industrial, military, aerospace, computer, telecommunication, consumer electronics, and medical electronics industries, miniaturization and the use of flex circuits continue to be of prime interest to electronics manufacturers. In China, COF manufacturers mainly include Danbond Technology, AKM Industrial, Compass Technology Company and others. China is the world's third

producer of COF and the world`s biggest consumption market.
