The global Chip Power Inductor market was valued at 1102.79 Million USD in 2021 and will grow with a CAGR of 4.21% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A chip power inductor is a passive two-terminal electrical component that stores electrical energy in a magnetic field when electric current is flowing through it. It can use high or low frequency radio signals as well as frequencies that are self-resonant. They are often found in power lines, RF transceivers, computers, consumer electronics, automotive electronics, etc. In this report, we focus on the research of the chip power inductor manufacturers and the statistic is based on the`s production value (Revenue).At present, in the foreign industrial developed countries the chip inductor industry is generally at a more advanced level, the world`s large enterprises are mainly concentrated in Japan. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position. But foreign companies` manufacturing cost is relatively high, compared with Chinese companies, the manufacturing cost has competitive disadvantage, as the Chinese chip inductor production technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increase . China`s chip inductor industry has developed into a national industry with certain research and production capacity, industry product mix has gradually improved, currently China has

become international chip inductor large consumption country, but the production technology is relatively laggard, it can only produce some low-end product, although the new production lines is increasing, the high-end product is still relying on import. TDK accounted for 21.79% of the Global Chip Power Inductor sales market share in 2016. Other players accounted for 21.62%, 17.97% including Murata and Taiyo Yuden. The market is not only influenced by the price, but also influenced by the product performance. The leading companies own the advantages on better performance, more abundant product`s types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin. Despite the presence of competition problems, due to the global recovery trend is slightly, investors are still optimistic about this area; the future will still have more new investment enter the field.
