Chiral separation column is an instrument used in chiral column chromatography which can separate chiral isomers (enantiomeric compounds). Chiral column chromatography is a variant of column chromatography in which the stationary phase contains a single enantiomer of a chiral compound rather than being achiral. The two enantiomers of the same analyte compound differ in affinity to the single-enantiomer stationary phase and therefore they exit the column at different times. Chiral separation column has a high concentration. The top four companies account for more than 84.51 % of market share. Daicel Corporation, Agilent Technologies, Merck (Sigma-Aldrich) and YMC are the tycoons of chiral separation column. Daicel Corporation is the largest manufacturer, with the market share of 58.23% in 2015.
