The global Chlor-alkali Ion Exchange Membrane market was valued at 44.92 Million USD in 2021 and will grow with a CAGR of 2.58% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Chlor-alkali Ion Exchange Membrane is used in electrolyzers at electrolysis plants in which brine is decomposed. It plays a key part in manufacturing caustic soda (sodium hydroxide)/caustic potash (potassium hydroxide), chlorine, and hydrogen-basic chemical products required in our daily lives. The chlor-alkali processes rely on an ion-exchange membrane to separate the sodium and chloride ions of the sodium chloride. A membrane caustic soda plant with manufacturing capacity of 10 K MT demands 300 sq.m Chlor-alkali Ion Exchange Membrane. The replacement cycle of the membrane is usually 2.5-4 years. Global chlor-alkali ion exchange membrane market is highly concentrated, with three company dominated the global market. Asahi Kasei is the largest player in the market, with volume share reached to 46.50% in 2017. Chemours has more customers in American and European market, while AGC is more welcomed in developing regions. China takes a major share in global chlor-alkali industry, followed by Europe and the United States. In China, foreign brands occupy large proportion of the chlor-alkali ion exchange membrane market. There is only one manufacturer in China, Dongyue Group with its business still in startup stage. Since the chlor-alkali is in modest developing stage. Owing to high technology barrier, it is expected that no

significant players would enter into chlor-alkali membrane market in the near future.
