The global Chlorinated Polyethylene market was valued at 453.05 Million USD in 2021 and will grow with a CAGR of 4.75% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Chlorinated polyethylene (PE-C) is an inexpensive variation of polyethylene having a chlorine content from 34 to 44%. It is used in blends with polyvinyl chloride (PVC) because the soft, rubbery chlorinated polyethylene is embedded in the PVC matrix, thereby increasing the impact resistance. In addition, it also increases the weather resistance. Furthermore, it is used for softening PVC foils, without risking plasticizer migration. Chlorinated polyethylene can be crosslinked peroxidically to form an elastomer which is used in cable and rubber industry. When chlorinated polyethylene is added to other polyolefins, it reduces the flammability. Chlorinated polyethylene is sometimes used in power cords as an outer jacket. The Asia-Pacific region led the global chlorinated polyethylene market due to the increasing demand for chlorinated polyethylene from various end-use industries, such as building & construction, wires & cables, and automobiles, among others. Growth in the Asia-Pacific chlorinated polyethylene market can also be attributed to the fact that China is the world leader in the production as well consumption of chlorinated polyethylene, followed by India.
