The global Chloromethanes market was valued at 940.4 Million USD in 2021 and will grow with a CAGR of 6.45% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Chloromethanes is a general term to cover methyl chloride, methylene chloride, chloroform, and carbon tetrachloride, which are all major goods of commercial significance. Chlorinated methanes are used chiefly as precursors?methyl chloride for silicones and other materials, methylene chloride for its solvent properties, chloroform for hydrochlorofluorocarbon-22 and carbon tetrachloride for chlorofluorocarbon-11 and -12. As CFCs are being phased out, use of carbon tetrachloride for newer HFCs such as HFC-245fa, HFC-365mfc, and possibly HFO-1234yf/ze is growing. In consumption market, the growth rate of global consumption was unstable recent years. The whole Asia is the mainly consumption regions due to the advanced production technology and rapid development of economy
