The global Circulating Fluidized Bed (CFB) Boilers market was valued at 741.31 Million USD in 2021 and will grow with a CAGR of .2% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

CFB boilers can produce energy from a variety of fuels such as biomass, coal, and peat. Additionally, because these boilers have a very low operating temperature, they emit fairly low levels of harmful gases such as carbon dioxide, nitrogen dioxide, and sulfur dioxide. Recent developments in CFB technology are expected to drive forward the way for modernization of current manufacturing facilities. Developments in using fluidized bed boiler method have observed a significant growth in the U.S, the U.K and Asia Pacific. Shifting from small scale CFB to large scale commercialization power generation facilities have been observed in Poland, and China.
