Power Fluid circulating fluidized bed (CFB) boilers are used for steam and power generation. They are characterized by their unmatched fuel flexibility and cover nearly all solid fuels from coal and biomass to alternative fuels and wastes. The clean combustion technology delivers high efficiency and reliability with lowest emissions. The CFB boiler allows for using a wide range of fuels, from conventional fuels such as coal to biomass as a primary fuel. Co-firing with waste materials, sludge or RDF is a typical application of CFB technology. Worldwide, Europe is the technology beginning source of CFB; but China is the largest market of CFB as thermal power accounts quite large percentage of total power demand in China. And countries such as India, Australia and Brazil are regarded as emerging market.
