The global Circulating Tumor Cell Diagnostics market was valued at 537.11 Million USD in 2021 and will grow with a CAGR of 8.55% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Circulating tumor cells are significantly useful in determining the status of disease progression rate and projection of therapy needed for tumor eradication. Further development of various tumor markers that can be used along with companion diagnostics to diagnose or monitor various forms of cancer are expected to boost usage rates of CTC tests in the coming years. Circulating tumor cell detection test possesses the ability to detect, quantify, and analyze tumor cells in the blood of cancer patients. It includes enrichment, detection and analysis of the detected circulating tumor cells. Circulating tumor cells tests are applicable in the characterization of tumor cells through biochemical marker analysis. CTC isolation, detection, and molecular characterization systems find investigational application in prostate, breast, colon, head, neck, skin, lung, and pancreatic cancer. Growing incidences oncology diseases and the introduction of novel biotechnological methods that enable the isolation and quantitation of circulating tumor cells. Furthermore, other factors like early disease diagnosis, cost savings on multiple treatments, drug safety, patient compliance, and optimization of therapies are attributive for rising demand for the preventive medicine, thus influencing the demand for CTC tests. On course of the forecast period it is expected that over 150 companion

diagnostic on-label combinations and a range of personalized therapeutic drugs under clinical trials and development pipelines based on companion diagnostics. The level of adoption of companion diagnostics is expected to significantly increase after these obtain complete FDA approval and are commercialized fully.
